A method for reducing the contamination properties by micro-organisms of a surface made of a mineral material, said surface having an area of at least 0.1 m^2 , said method including the following steps:

- a) application, onto the surface to be treated, of a layer of a solution or of an aqueous suspension of a hydrophilic polymeric material ;
- b) drying the surface processed at the step a), for obtaining said surface covered with a layer of said hydrophilic polymeric material.
